

When two networks meet for the first time...
 what do they try to find out about each other?
 do they only exchange an address or something else?

Information about identity

People
 animals (Dogs, cats)
 resources

Network is a bridge
 it is a network in
 the original, but today
 usually it is not

connected into a product
 and then a real individual
 and bridges are the agents
 that allow things to happen

are there 'spontaneous'?

or something happens
 at the beginning of the
 network
